Discord Bridge

The Discord bridge is no longer available for purchase. This documentation is for existing customers of the bridge only.
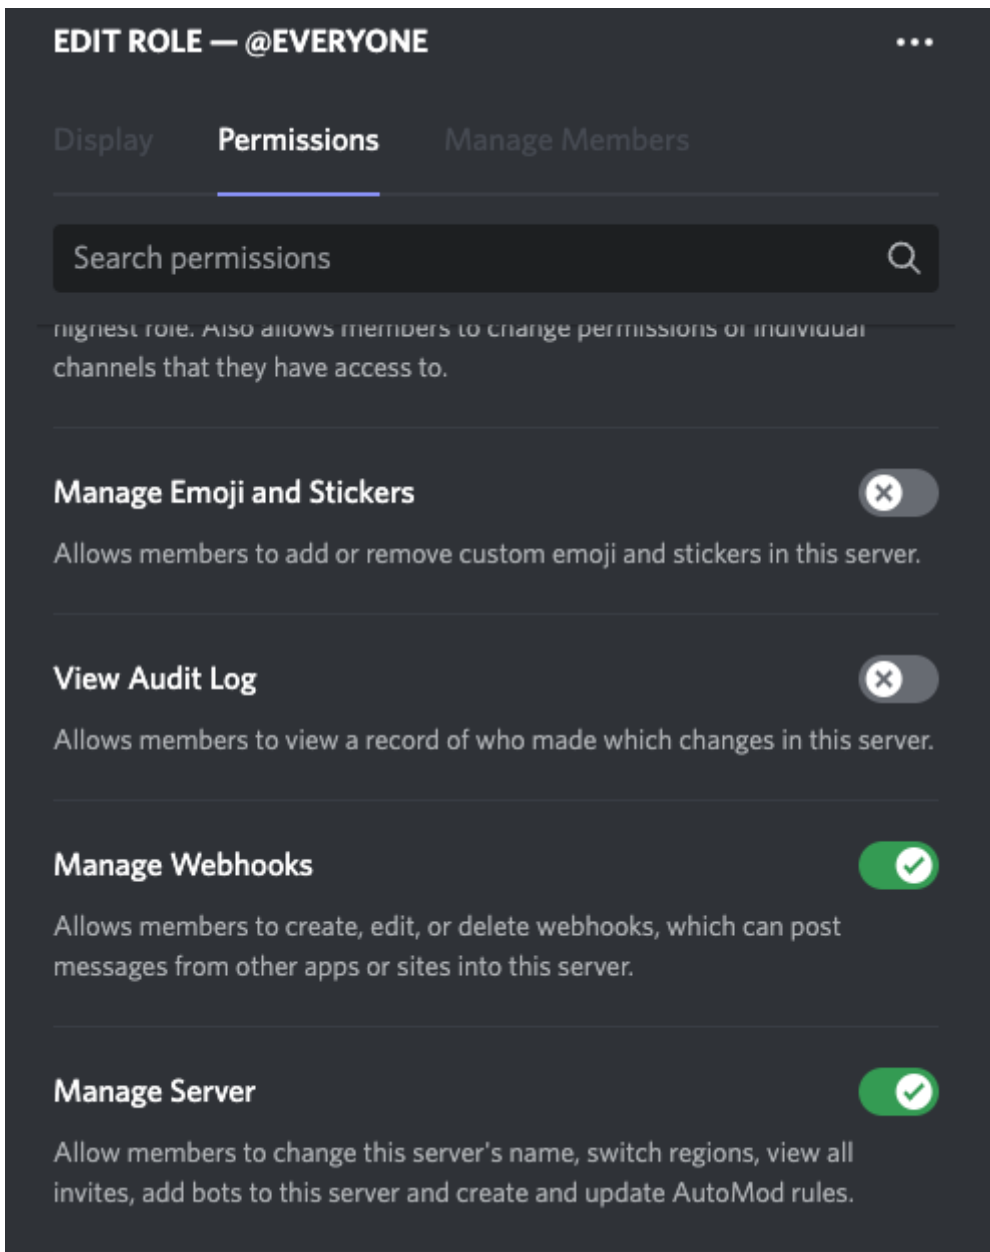

Setup

First, you need to register a Discord application for your bridge. Discord applications can be registered and managed in the Discord Developer Portal.

1. Click on the `New Application` button in the upper right corner.
2. Give it a name (visible when authorizing the bridge), read Discord's Terms and click `Create`.
3. Note the Client ID. It's required for the bridge.
4. Navigate to the `Bot` tab. The navigation can be found on the left.
5. Click `Add Bot`. You may also need to click `Yes, do it!` to confirm your action.
6. Note the Bot Token. It's required for the bridge.

Authorize your account

Before authorizing your Discord App, you first need to grant your account the following rights:

1. Manage Webhooks
2. Manage Server

Connect Discord server(s)

You need to authorize your Discord App to each Discord server you wish to bridge. Give the following URL to a Discord server admin, if you aren't the Discord server admin.
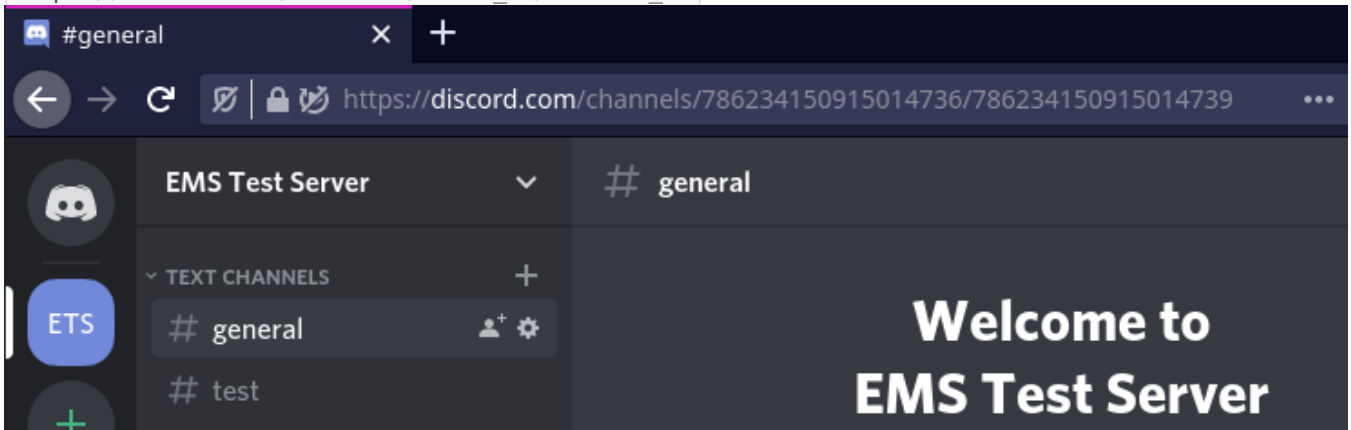

The authorization URL is
`https://discordapp.com/api/oauth2/authorize?client_id=YOUR_CLIENT_ID&scope=bot&permissions=60725043 2`. Replace `YOUR_CLIENT_ID` with your Client ID mentioned above.

Usage

Bridge a room

1. In a web browser, navigate to the Discord room you wish to bridge. The URL includes the server ID (also called guild ID) and the channel ID. The URL format is `https://discord.com/channels/GUILD_ID/CHANNEL_ID`.

2. In a Matrix room you want to bridge, invite `@discord:example.ems.host` (replace the domain with the one of your homeserver).

3. Post the message `!discord bridge GUILD_ID CHANNEL_ID` after replacing the two placeholders.

4. A privileged Discord user will need to approve the bridge request by responding with `!matrix approve`

5. Messages from Discord are now bridged to Matrix and vice versa.

Unbridge

To unbridge a room post `!discord unbridge` in the Matrix room.

Private Chats

Currently, private chats are not supported by the EMS Discord bridge.
