

Token based registration

Create a new registration token using the [Synapse Admin API](#). Give this to your users.

The registration flow looks like this:

1. Enter username, password and email as normal. Click [Register](#)

The screenshot shows a web interface for creating an account. On the left is a sidebar with a green circular logo containing three white curved arrows. Below the logo, the text 'English (US)' is displayed with a downward arrow. The main content area is titled 'Create account'. Below the title, it says 'Host account on' followed by a blacked-out domain and 'ems.host'. There are three input fields: 'Username' with the value 'token1', 'Password' with masked characters, and 'Confirm password' with masked characters. Below these is an 'Email' field with a blacked-out address and '@element.io'. A note below the email field states: 'Add an email to be able to reset your password. Use email to optionally be discoverable by existing contacts.' A large green 'Register' button is at the bottom of the form. At the very bottom of the page, there is a link: 'Already have an account? [Sign in here](#)'.

2. Enter the registration token and click [Continue](#)
