

# Components of Element Server Suite

Welcome to Element Server Suite! Our secure communications platform enables a lot of functionality out of the box. This guide will help you get started.

## Components of Element Server Suite

The Element Server Suite is composed of the following functionality:

- Element Matrix Server
  - The Element Matrix Server is our maintained version of the synapse homeserver, packaged and delivered according to our best practices.
- Monitoring
  - Our monitoring stack allows you to monitor the health of our Server Suite running in your environment.
- VoIP
  - Our VoIP stack brings voice and video calling functionality into your environment.
- Web Client
  - Our modern web client brings our messaging, voice, and video functionality directly to your users in an easy to use interface.
- Extensions
  - Our app store allows integrating additional functionality via extensions into Matrix rooms.
- Bridges
  - We have a full suite of connections to other messaging services for helping you bring your Element users into your existing communications channels.
- Admin Console
  - We have an admin console that puts you in control of the configuration and operation of the whole suite.
- Room Audit and Room Admin Capabilities
  - We have software that allows you to audit encrypted communications. We also have software that allows you to administer any rooms created on your homeserver.
