

Matrix Rooms

Documentation covering from basic usage and creation of rooms to room management.

- [Understanding Matrix Rooms](#)
- [Getting Started: Creating a Room](#)
- [WIP Getting Started: Using a Room](#)
- [Managing a Room: Room Info](#)
- [Managing a Room: Room Settings](#)
- [Managing a Room: Advanced Room Management](#)
- [Exporting Messages](#)

Understanding Matrix Rooms

All communication via Matrix takes place within rooms. Rooms can be made available publicly or kept private, and they can be configured to be encrypted depending on your requirements. From the Element Matrix clients, [Element Web App](#) or [Element Mobile / Desktop Apps](#), rooms can be found under the `Rooms` section. However when speaking directly to one particular person, a Room is marked as a Direct Chat and can be found under the `People` section instead.

Rooms, if desired, can be prioritized as `Low Priority` or `Favorite`, moving them into dedicated sections named as such. Rooms can also be organized into any number of Spaces, allowing you to further manage the rooms you see. In addition, you can customize the notification settings for each room to alert for `All messages`, only `Mentions & keywords` or to `Mute room`.

What's Next?

Getting Started

To start learning the basics of creating and using rooms, check our 'Getting Started' series of docs on the subject, starting with [Creating a Room](#).

Getting Started: Creating a Room

Disclaimer: This guide refers to using the Element Matrix clients, [Element Web](#) or [Element Desktop](#) apps

You can create a room by clicking the  button, located at the top alongside your current Space's name within the Left Panel - you will be presented with various options to create a room matching your requirements.

Starting a Direct Chat

After clicking [Start new chat](#), you will be presented with the [Direct Messages](#) prompt, from here you can search for other people using their name, email address or username. You can select your desired contact(s) to directly invite them, or copy the provided invite link to send separately. You will see suggestions based on people you have most recently interacted with or search directly.

Direct Messages

×

Start a conversation with someone using their name, email address or username (like `@user:example.com`).

Some suggestions may be hidden for privacy.
If you can't see who you're looking for, send them your invite link below.

OR SEND INVITE LINK

<https://matrix.to/#/@user:example.com>

📄

Searching for users: When searching for users, searching by name requires you to have interacted (been within a common room / space) with the user previously, otherwise you will need to specify their full Matrix ID, for example, `@user:example.com`.

After confirming the invitees for the chat, click `Go`. This will open a draft of the room in the Right Panel, you must then send your first message for the room to be created and the recipients to be invited.

Starting a New Room

After clicking [New room](#), you will be presented with the [Create a private room](#) prompt, from here you can specify the room settings as desired.

Create a private room

Private room (invite only)

Only people invited will be able to find and join this room. You can change this at any time from room settings.

Enable end-to-end encryption

You can't disable this later. Bridges & most bots won't work yet.

Hide advanced

Block anyone not part of example.com from ever joining this room.

You might enable this if the room will only be used for collaborating with internal teams on your homeserver. This cannot be changed later.

Cancel

Create room

Create a public room

Public room

Anyone will be able to find and join this room. You can change this at any time from room settings.

Room address

e.g. my-room :example.com

Hide advanced

Block anyone not part of example.com from ever joining this room.

You might enable this if the room will only be used for collaborating with internal teams on your homeserver. This cannot be changed later.

Cancel

Create room

- **Name:** This is the name your room will appear as, if you are making a public room, make sure you choose a name that will be easily found when searching and is appropriate for the homeserver.
- **Topic:** This works as a description for the room, it is presented at the top of a room

  **Hello World** ▾ This is my descripton

[Click to read topic](#)

- **Room Type:** Here you can customize whether the room should be publicly accessible, changing to public will change the available configuration options, per images above, and prevent enabling end-to-end encryption¹.
 - **Private Rooms | Enable end-to-end encryption:** Enabling this at any time prevents disabling it, ensure when creating the room you would like encryption. It is always possible to enable encryption after room creation via the room settings.
 - **Public Rooms | Room Address:** Much like your Matrix ID `@user:example.com`, your room will also have an ID or address `#room:example.com` that can be used to link to it from other chats, using `#`. It maybe beneficial to choose a simpler name here, allowing the room name to be more descriptive. Do note some characters are not allowed, such as spaces, `#` and `%`.
- **Advanced - Block anyone not part of homeserver:** Enabling this prevent users from other homeservers from joining the room.

“¹ Whilst you can enable encryption for a public room via the room settings after creation it's not recommended to add encryption to public rooms. Anyone can find and join public rooms, so anyone can read messages in them. You'll get none of the benefits of encryption, and you won't be able to turn it off later. Encrypting messages in a public room will make receiving and sending messages slower.

What's Next?

Using A Room

Now you've created a room, try the next in the Matrix Rooms: Getting Started series, [Getting Started: Using a Room](#)

Managing A Room

To learn more about managing a room, try our Matrix Rooms: Managing a Room series, starting with [Managing a Room: Room Info](#).

WIP Getting Started: Using a Room

URL Previews

When someone puts a URL in their message, a URL preview can be shown to give more information about that link such as the title, description, and an image from the website.

You have **enabled** URL previews by default.

Enable URL previews by default for participants in this room

Enable URL previews for this room (only affects you)

Leave room

Leave room

General

- Room Name - The name of your room as it appears within a users' room list.
- Room Topic - A description of the room, present along the top bar when viewing the room.
- Avatar - An icon for the room, change by clicking the `Pencil` icon and uploading your desired image.

Check the FAQ Entry for details on [What is the preferred resolution for room and space icons?](#)

Room Addresses

Published Addresses

Published addresses can be used by anyone on any server to join your room. To publish an address, it needs to be set as a local address first.

- Main Address - from this dropdown you can select which local address you would like to be the main address to your room from external homeservers. Once a local address is first set, this will default to that address, however you can remove the main address by selecting `not specified` from the dropdown.
- Publish this room to the public in example's room directory - toggling this will allow your room to be discoverable by user's with access to the homeserver.
- Room Address - you can also publish other addresses in addition to the main address by adding other local addressed here and clicking `Add`.

Local Addresses

Set addresses for this room so users can find this room through your homeserver.

- Room Address - Provide the address that users can use to access your room, creating your first Room Address will automatically set it as the `Main Address` under `Published Addresses`

Other

- URL Previews - When someone puts a URL in their message, a URL preview can be shown to give more information about that link such as the title, description, and an image from the website. You can enable this for the room just for you, or as the default for participants in the room.
- Leave room - Here you can opt to leave the room:

If you are the only person in a room, if you leave, no one will be able to join in the future, including you. If you are the sole user with Admin rights to a room and you intend to leave, you should increase the power level of an active member to allow for room management.

Security & Privacy

From this section, you can turn on Encryption if not already on, confirm who can join and the historical messages they can read.

Slack Integration @slackbot:matrix.org

Management of a room is generally handled by it's admins and moderators, however under-the-hood, rooms make use of power levels. A users' power level is a number between 0 and 100 where the higher the number, the more access you have. The default power levels for the admin and moderator roles are 100 and 50 respectively, however you can specify any custom power level for specific actions.

Privileged Users

Setting a user from this list to Default will remove them as a Privileged User

If the only Admin for a room is demoted, you will not be able to manage the room, be careful when applying changes to permission levels

Here you can manage all Privileged users for the room, and the power level they have. You can select either Default, Moderator, Admin or Custom Level.

Add privileged users

From this section you can search existing members of the room and specify a desired power level to elevate them as a Privileged User.

Banned Users

A list of banned users, and the option to revoke the ban will be presented here if any bans have been made. You can identify who banned each specific user by hovering over the banned user.

Banned users

Permissions

From here you can see a list of all actions possible within a room, and control the required power level to perform those actions.

Actions and Default Power Levels
<ul style="list-style-type: none">• Default role: Default (0)• Send messages: Moderator (50)• Invite users: Default (0)• Change settings: Moderator (50)• Remove users: Moderator (50)• Ban users: Moderator (50)• Remove messages sent by others: Moderator (50)• Notify everyone: Moderator (50)• Change room name: Moderator (50)• Change permissions: Admin (100)• Change history visibility: Admin (100)• Change main address for the room: Moderator (50)• Change room avatar: Moderator (50)• Upgrade the room: Admin (100)• Change server ACLs: Admin (100)• Enable room encryption: Admin (100)• Change topic: Moderator (50)• Send m.room.pinned_events events: Moderator (50)• Send reactions: Default (0)• Remove messages sent by me: Default (0)• Send org.matrix.msc3401.call events: Moderator (50)• Send org.matrix.msc3401.call.member events: Moderator (50)• Modify widgets: Moderator (50)• Voice broadcasts: Moderator (50)

Notifications

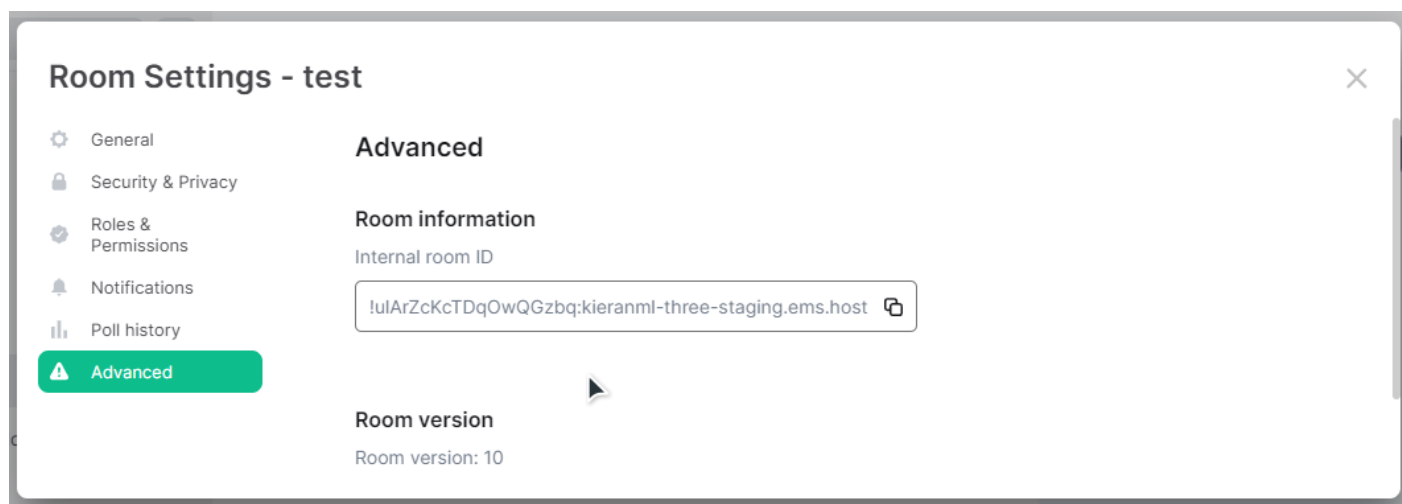

This section configures your personal notification settings and isn't a management option applicable to all room users. To start learning the basics of creating and using rooms, check our 'Getting Started' series of docs on the subject, starting with [Creating a Room](#) and specifically [Using a Room](#) for notification configuration.

Poll History

This section is another way to access Poll History, you can also access simply via the [Room Info](#) pane. To learn more, check the [Room Info](#) doc from our 'Managing a Room' series.

Advanced

From this section, you can confirm the current room version as well as the Internal Room ID.

What's Next?

Advanced Room Management

Now you've mastered this section, try the next in the Matrix Rooms: Managing a Room series, [Advanced Room Management](#), for details on available room settings.

Managing a Room: Advanced Room Management

Disclaimer: This guide refers to using the Element Matrix clients, [Element Web](#) or [Element Desktop](#) apps

Transferring Ownership of a Room

There are several scenarios where you might wish to transfer ownership of a room; perhaps you no longer wish to maintain the room yourself; have accidentally removed your, or possibly all privileged users' permissions from a room; or wish to take over an abandoned room.

How do I transfer ownership of a room? / How do I restore lost privileges to a room?

If you do not have permissions yourself, contact a current Admin for the room and get them to follow these steps to promote you.

Admins cannot remove admin permissions from other users, only themselves. Make sure any user prompted to Admin is correct before making changes.

1. Open the room, click  / **Room Info** from the top-right
2. Open **Room Settings**, click to **Roles & Permissions**
3. Add a new privileged user, setting their power level to **Admin**
4. Under privileged users, find your username, change your power level from **Admin** to the desired level

How do I take over an abandoned room? / How do I restore lost privileges to a room without an Admin?

For the following you will need Admin access to the homeserver. If you do not manage the homeserver for your room, you will need to contact the support for that homeserver.

When a user is no longer active on your homeserver, or they have been deactivated, you may find some rooms where there are no remaining active Room Admins preventing administration of those rooms. This guide will

make extensive use of the Admin API, see our [Getting Started Using the Admin API](#) guide for more information, and if required, will also use the Client-Server API, which has an equivalent [Getting Started Using the Client-Server API](#) guide.

If there is a non-deactivated but no longer active Room Admin user still present within the room, you can make use of the Admin API [Make Room Admin API](#) to grant the Admin role to another user:

```
POST https://HOMESERVER_URL/_synapse/admin/v1/rooms/ROOM_ID/make_room_admin
{
  "user_id": "@user:example.com"
}
```

However that leaves a problem if there are no longer any admins still within the room. Fortunately, whether they are within the room or not, users retain their power levels unless they demote themselves prior to leaving.

So for rooms where you are unsure who holds Room Admin (I.E Power level 100), you can use the Admin API [Room State API](#):

You can find the `ROOM_ID` from [Room Settings Advanced](#)

```
GET https://HOMESERVER_URL/_synapse/admin/v1/rooms/ROOM_ID/state
```

This will return a list of states, find the state where `"type": "m.room.power_levels"`, from within that states' `"content": { "users": { } }` you will find a list of users followed by their power level, the Room Admins of the room will have a power level of 100.

If the listed Room Admins have been deactivated, you will first reactivate one of them. To reactivate a deactivated user, you can use an Admin Console if you have access to one to perform this operation for you, or you can use the Admin API [Create Or Modify Account API](#):

`USER_ID` should look something like `@user:example.com`, otherwise known as the full Matrix ID

```
PUT https://HOMESERVER_URL/_synapse/admin/v2/users/USER_ID
{
  "password": "NEW_PASSWORD",
  "deactivated": false
}
```

At this point you should have an active account with Room Admin available that can be used to regain access to management of the room. If you've reactivated a deactivated user, you will have had to set a new password for the account, you could at this point login as the user using a Matrix client. You would then be able to rejoin any required rooms, promoting new users to the Admin role before [deactivating the account](#).

Alternatively you can generate an access token for an account using the Admin API [Login as a user API](#).

```
POST https://HOMESERVER_URL/_synapse/admin/v1/users/USER_ID/login
{}
```

```
{
  "access_token": "<opaque_access_token_string>"
}
```

The users' access token can be used by the [Client-Server API](#) to perform actions, such as joining rooms and changing room permissions.

To join a room you will use the Client-Server API [Join API](#)

```
POST https://HOMESERVER_URL/_matrix/client/v3/join/ROOM_ID
{}
```

Finally, you can set the power levels for users within a room using the Client-Server API [Events API](#):

```
PUT https://HOMESERVER_URL/_matrix/client/v3/rooms/ROOM_ID/state/m.room.power_levels
{
  "users": {
    "@user:example.com": 100
  }
}
```

Important Notes

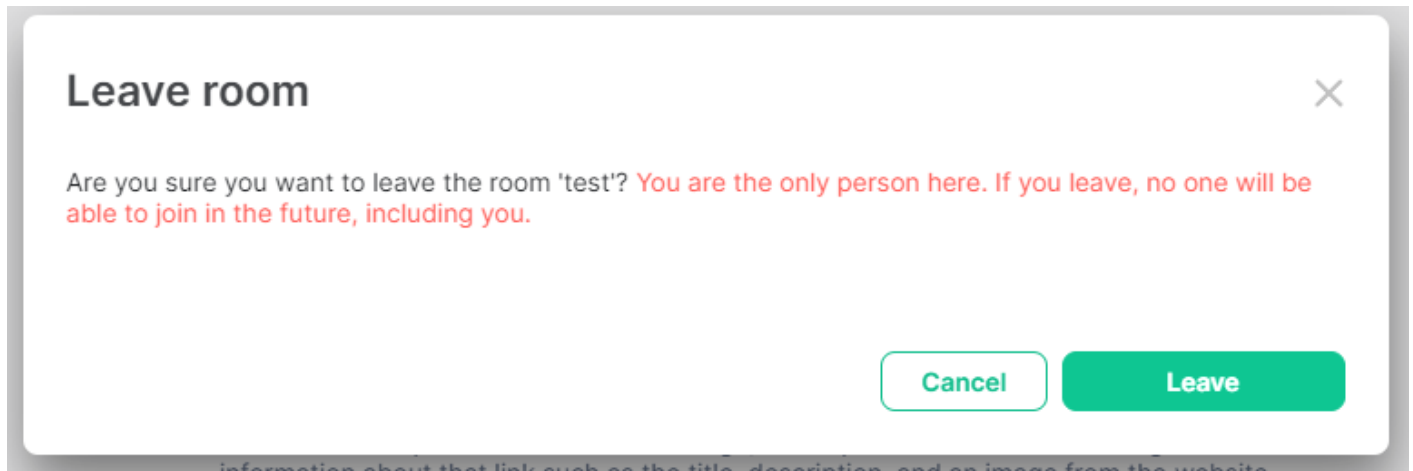

Any deactivated user that was reactivated via these steps should be deactivated once again following the process. You can do this a number of ways, see our [Deactivating a Matrix Account](#) documentation for further guidance.

The original Room Admin will still retain their admin power level, as Room Admins are not able to demote other admins, for deactivated user this isn't an issue however if the user is still active and you want to demote them you should repeat the final step. Using the Client-Server API [Events API](#) send that users' own username with the power level you want them to have.

Removing a Room

There is no way to unilaterally delete a room unless you own the homeserver it is on, however an invite-only room will no longer be able to be joined once all members of the room have left. As an admin it is possible to

remove people from the room via the [Room Info](#) panel see the [Managing a Room: Room Info](#) page, once no other members remain, leaving the room will offer a final prompt to confirm the action.

Tombstoning a Room

An alternative to everyone leaving a room, and a new one being created is to Tombstone it. This acts like closing a room and pointing it to a replacement. You can find the steps for this on our [FAQ Page](#).

Deleting a Room

If you manage a homeserver you can delete a room from it, you can find the steps for doing this if you're an EMS customer on our [FAQ Page](#). Rooms across multiple homeservers will only be deleted from your homeserver.

Exporting Messages

Note: If you are an EMS server admin and wish to export your entire EMS server, please see [Migrate From EMS to Self-Hosted](#).

Using your Element client you can export your Room's message history in HTML, Plain Text or JSON format - including attachments.

1. Open the room you wish to export message history

2. Access 'Room Info' using the icon in the top right

3. Select 'Export Chat', then confirm your desired settings for export
