

# Getting Browser Network and Console Logs

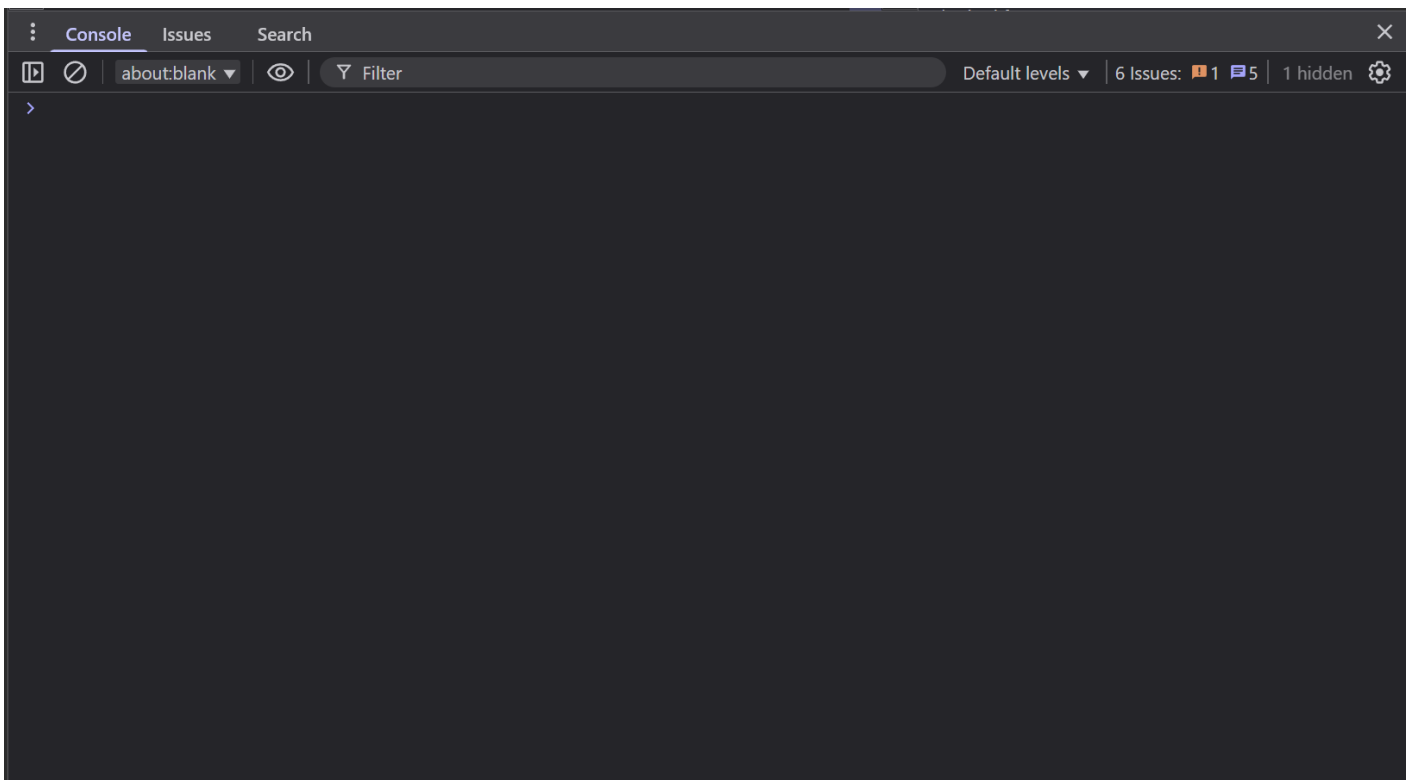

To troubleshoot some issues, logs from your browsers' Network and Console tabs will be requested, please see the steps below to pull those logs.

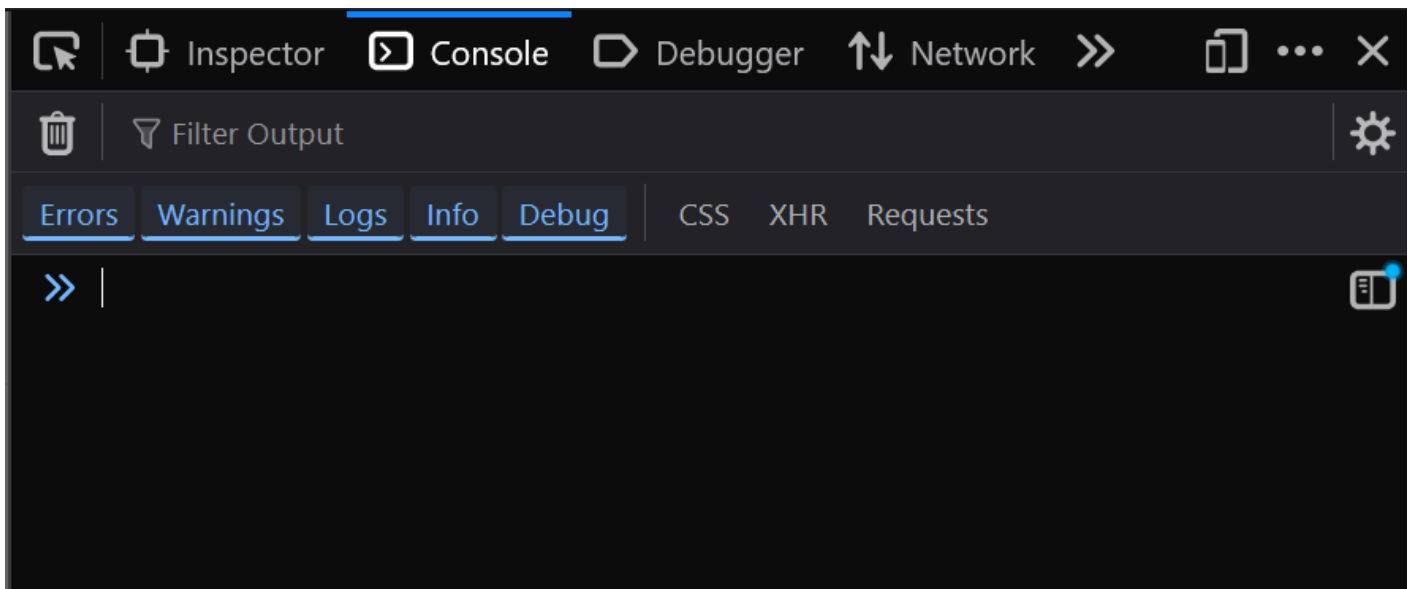

## ☐☐ Accessing Developer Tools

- Press `F12` or `Ctrl+Shift+I` (Windows/Linux)
- Or `Cmd+Option+I` (Mac)
- Alternatively: Right-click on the page > **Inspect**

## ☐☐ The Console Tab

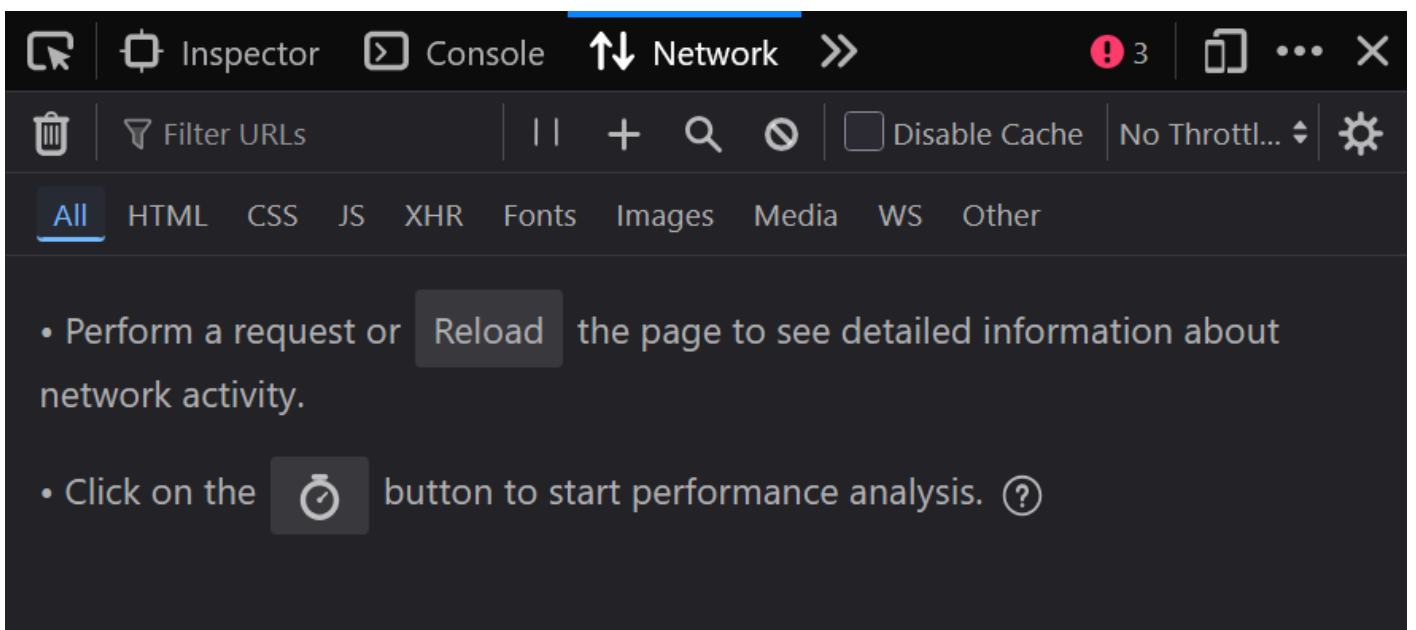

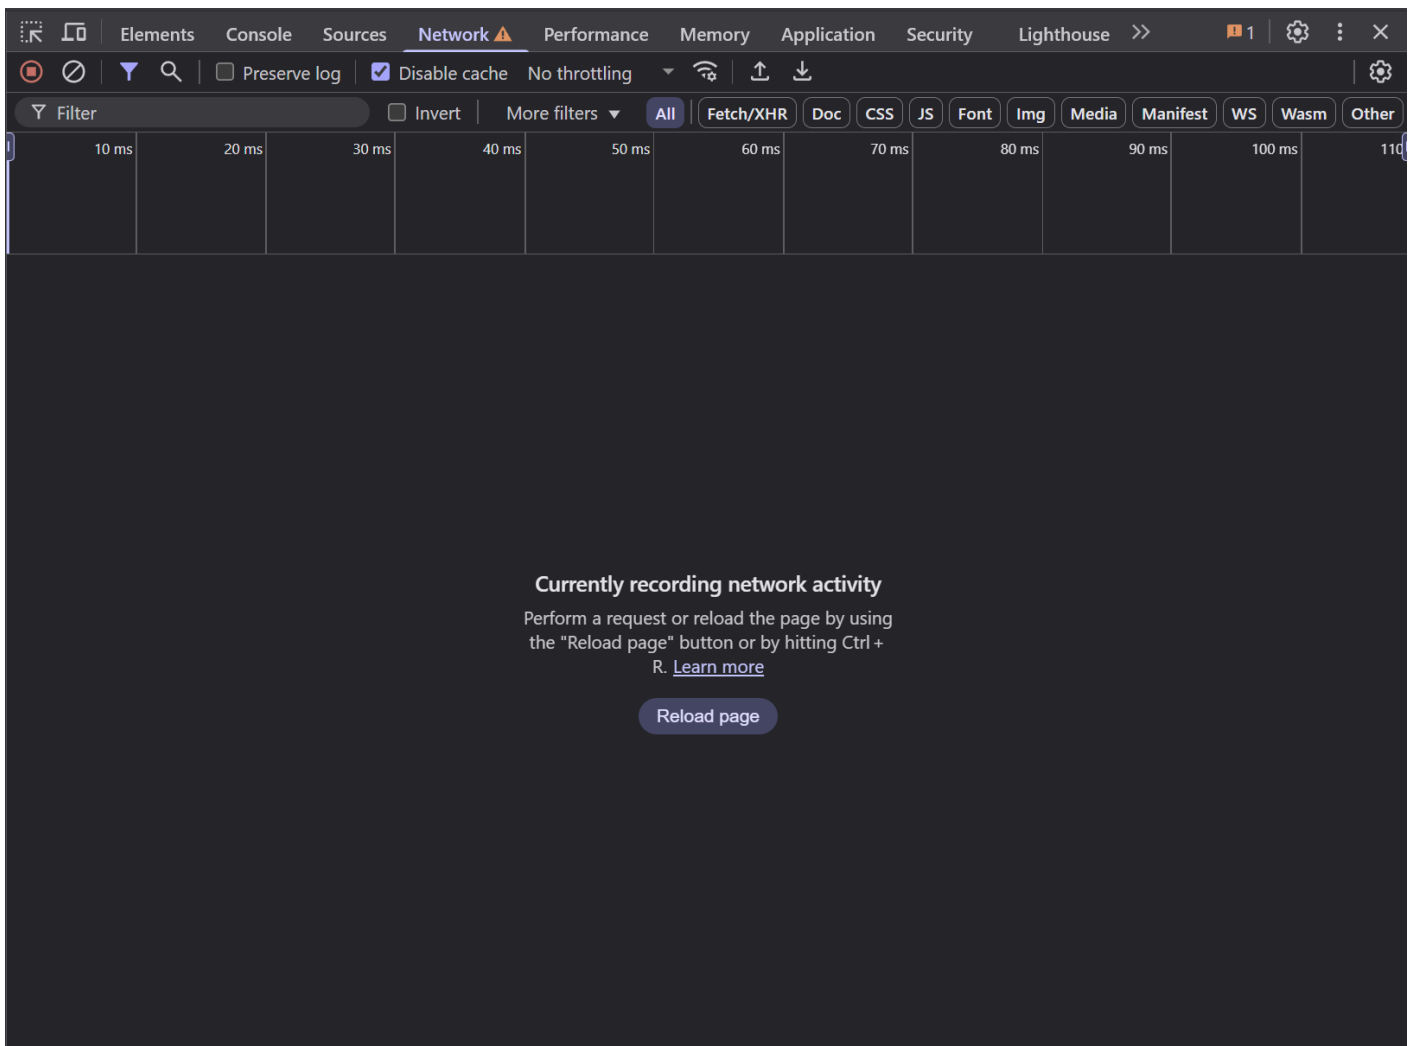

After opening Developer Tools, click the **Console** tab.

## ☐ Accessing the Network Tab

After opening Developer Tools, click the **Network** tab.

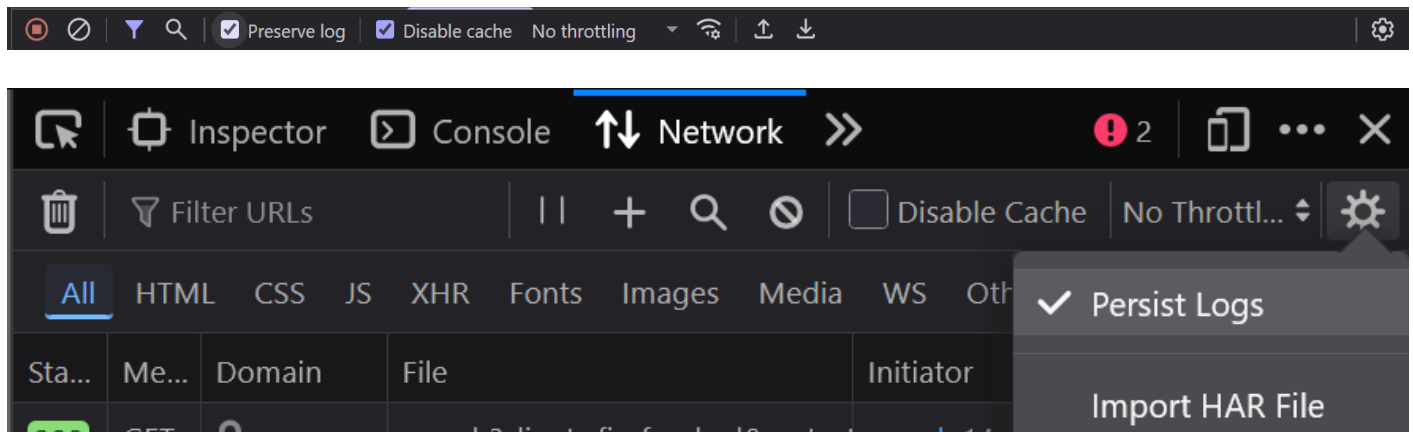

This shows all network requests (like XHR, Fetch, JS, CSS, etc.). Make sure to **refresh the page** if you opened the tab after the page loaded.

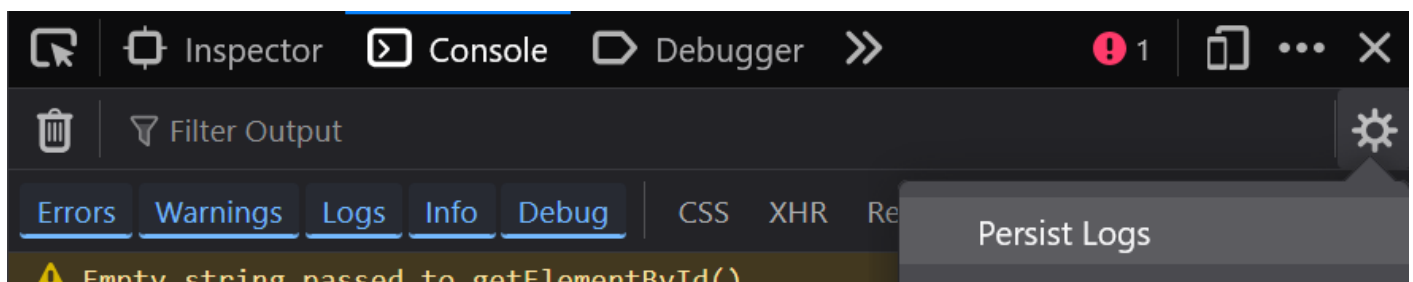

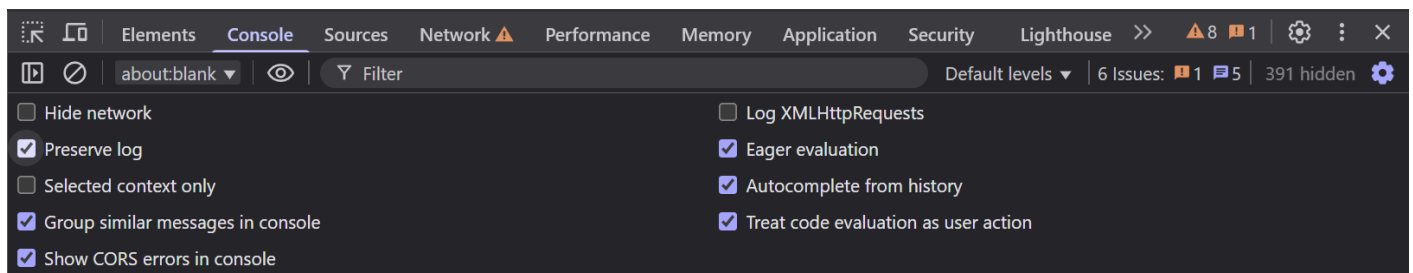

# ☐☐ Persisting Logs

By default, logs may clear on navigation or refresh.

To keep logs, on the **Network** tab look for the "**Preserve log**" checkbox or the "**Persist Logs**" dropdown option near the top.

On the **Console** tab look for the "**Preserve Log**" checkbox or the "**Persist Logs**" within the Settings cog near the top.

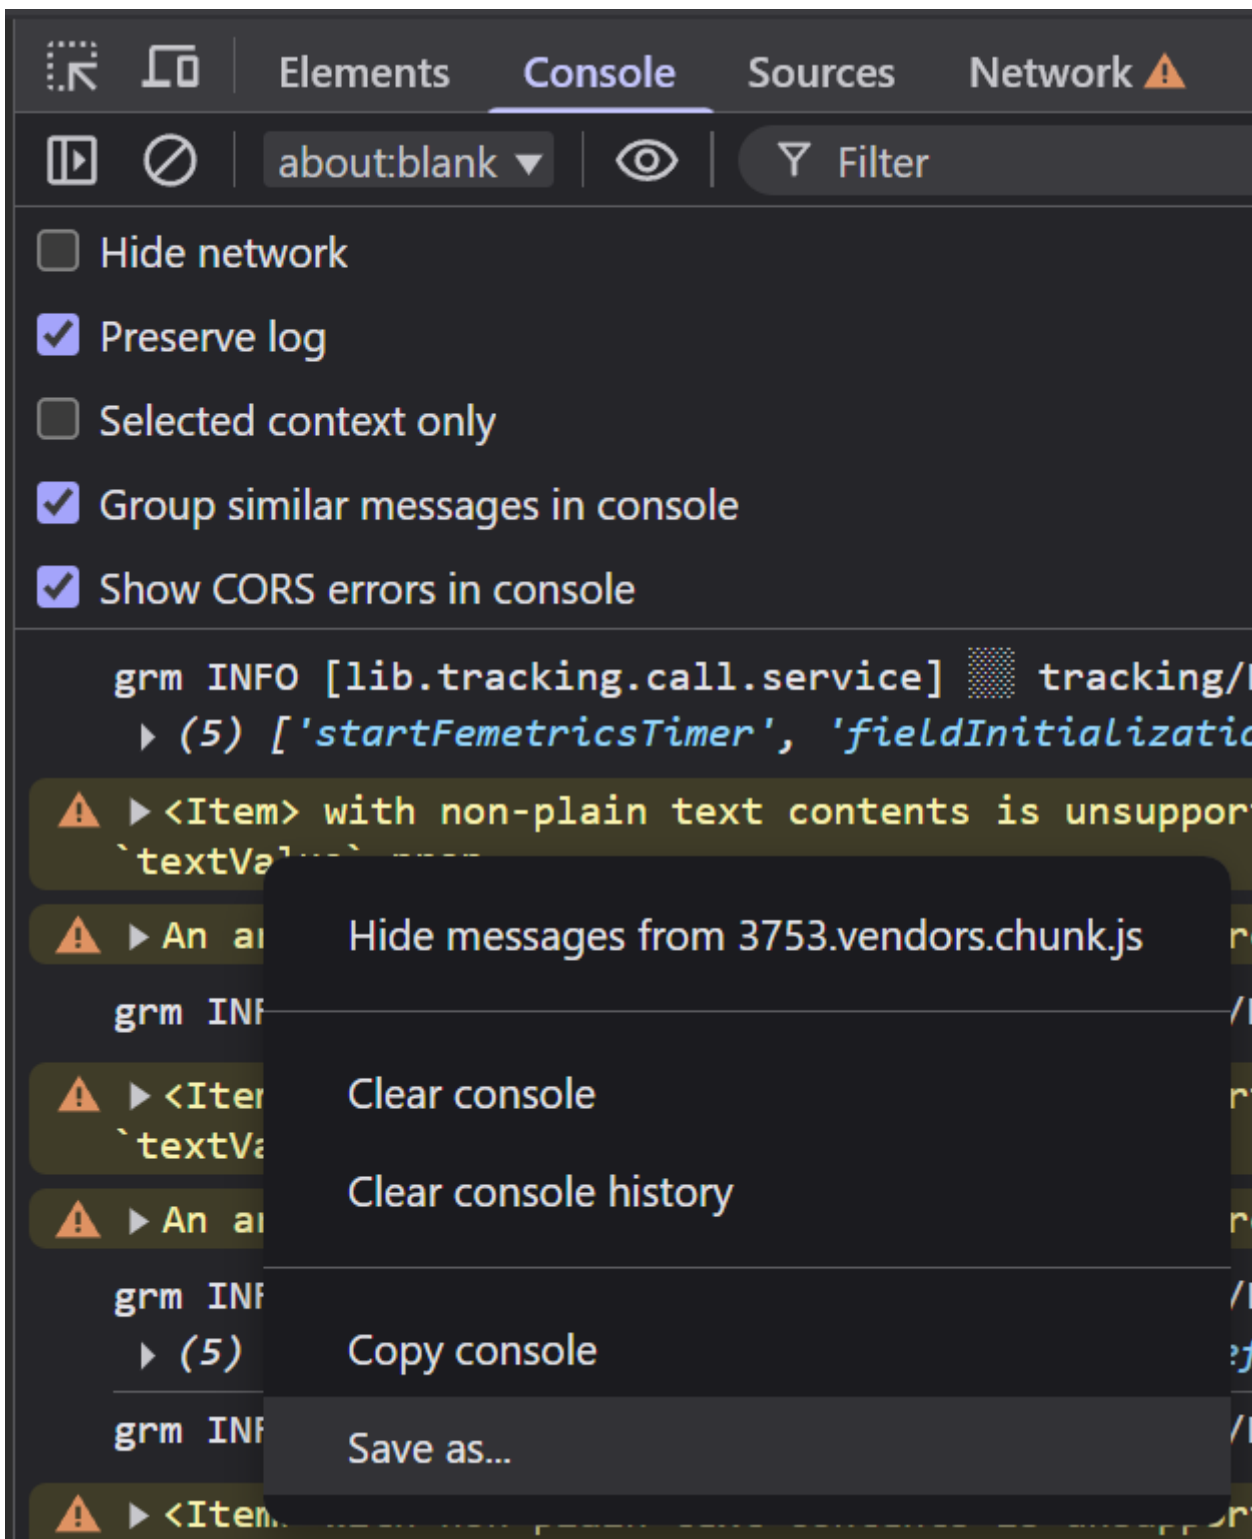

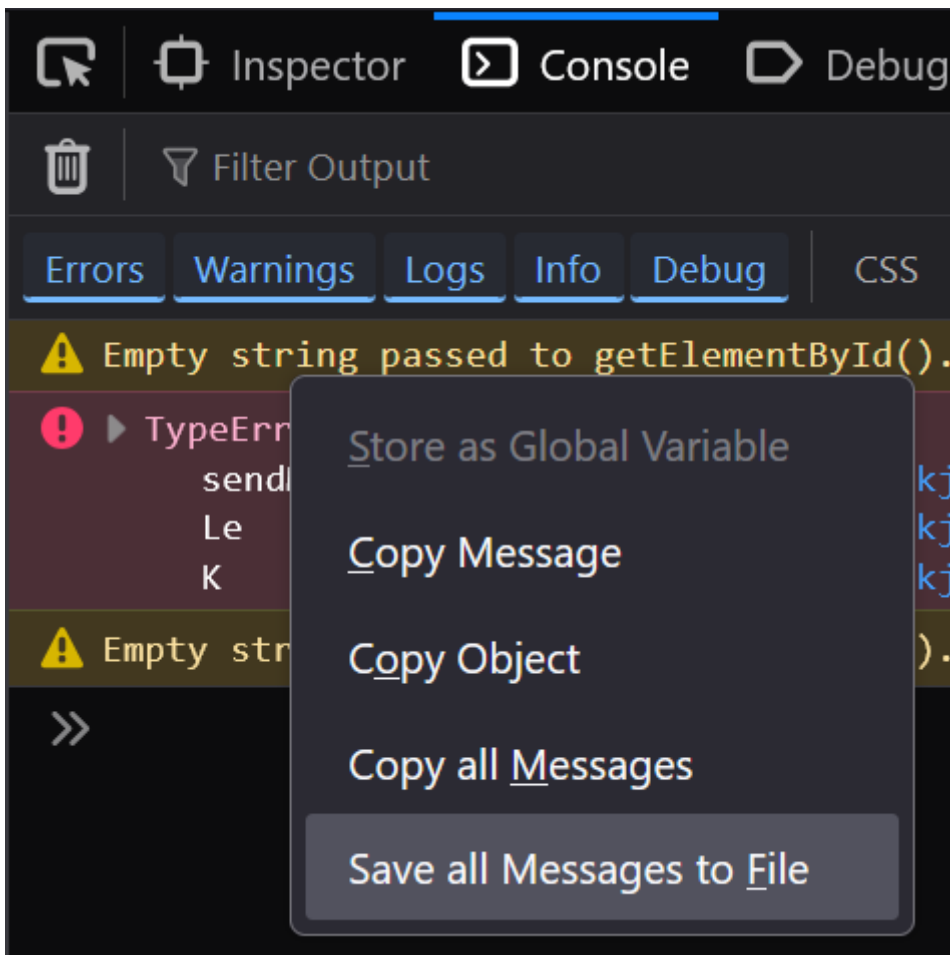

Enable it to keep logs between page loads.

# ☐☐ Saving Console Output

1. Right-click in the **Console** area.

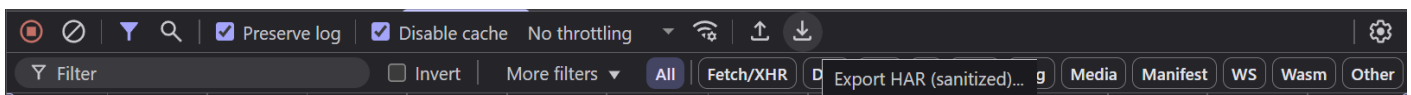

2. Choose "Save as..." or "Save all Messages to File" to download the console output.

## Exporting Network Traffic as HAR

1. Go to the **Network** tab.
2. Make sure "**Preserve log**" is enabled if you want to capture navigation.
3. Reload the page or reproduce the issue.
4. Click the download button ("**Export HAR (sanitized)...**") on the top bar.
