

Notification Settings

Disclaimer: This guide refers to using the Element Matrix clients, [Element Web](#) or [Element Desktop](#) apps

Accessing Notification Settings

You can change your Matrix account settings by clicking your profile icon in the top left of the Element client. By default, this will be a colored circle with the first letter of your Matrix ID. From the presented drop-down menu, you'll be able to jump into specific settings straight away, or access `All Settings`. Clicking `All Settings` will take you first to `General` settings, click `Notifications` in the vertical navigation menu on the left to open `Notifications` settings.

Info: The below setting layout / order may change in subsequent client updates, however generally most settings will still perform the same function.

Notification Settings

Notifications

Enable notifications for this account	<input checked="" type="checkbox"/>
Turn off to disable notifications on all your devices and sessions	
Enable notifications for this device	<input checked="" type="checkbox"/>
Enable desktop notifications for this session	<input type="checkbox"/>
Show message in desktop notification	<input type="checkbox"/>
Enable audible notifications for this session	<input checked="" type="checkbox"/>
Enable email notifications for kieranml+e1@element.io	<input checked="" type="checkbox"/>

Global	Off	On	Noisy
Messages in one-to-one chats	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Encrypted messages in one-to-one chats	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Messages in group chats	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Encrypted messages in group chats	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>

Mentions & keywords	Off	On	Noisy
Messages containing my display name	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Messages containing my username	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

Messages sent by bot	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
When rooms are upgraded	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>

Notification targets
Email Notifications kieranml+e1@element.io

Notification settings allow you to customize default notification settings which are synced to your account, however you are also able to customize whether you receive notifications for this specific device. **Note:** A device is per client, using both a web-based Matrix client and a Desktop client on the same physical device will still appear as two separate devices.

Desktop Notifications

To enable desktop notifications from your client, you can enable the toggle 'Enable desktop notifications for this session', you can also customize these notifications to also display the message that triggers the notification using the 'Show message in desktop notification' toggle. When using a web-based Element client, you will also need to accept permissions allowing the client to display notifications.

Notification types explained

Notification settings allow notifications to be set as either 'Off', 'On' or 'Noisy'.

- **Off:** You won't be notified when the selected event happens.

- **On:** You will get a message popping up when the selected event happens, but no sound.
- **Noisy:** You will get a visual highlight (red badge and/or text highlight), a sound and/or vibration (depending on the device) when the selected event happens.

For finer tuning, you can easily configure per room notification setting from the context menu you get by clicking on the  icon that appears when hovering over the room name in the room list. You can use this to temporarily mute a room, or make sure you're not missing anything from a given discussion. You can select the following options:

- **Mute:** You won't be notified, even if your name or a keyword is mentioned.
- **Mentions only:** You will only be notified for the items that are meant to be 'noisy', i.e. your name and keywords.
- **All messages:** You will get a (silent) notification for every message happening in the room; your 'noisy' events (e.g. your name being mentioned) will still be noisy (red badge and sound).
- **All messages (Noisy):** every message will make a noise on top of the visual notification. Your noisy events will still be differentiated by a red badge.

Keyword Notifications

From the notification settings you can also add additional keywords to listen for to trigger a notification. You can directly specify how a notification triggered from these keywords responds in the 'Mentions & keywords' section.
